

User Guide

Module Code: CO4072

Group: 4

Set: 2

Module Title: Problem Solving with Programming

Word count: 540

Date of Submission: 14/06/2026

Initial Information

1.1 Files

The files contained in the folder should be as follows:

Name	Last commit	Last update
 Pictures	a good number of changes	23 hours ago
 __pycache__	user section back buttons	2 days ago
 .gitignore	updated ui	5 days ago
 Problem_Solving_with_Programming_...	Edit Calendar_Update.py	1 month ago
 README.md	Initial commit	1 month ago
 booking.py	first commit	1 week ago
 bookingsystem.py	finished admin UI	1 week ago
 flight.py	bug fixed price/needs customer info page	5 days ago
 gui.py	code fixes	3 hours ago
 passenger.py	first commit	1 week ago
 price.py	first commit	1 week ago
 tempCodeRunnerFile.py	a good number of changes	23 hours ago

Contents:

1. Pictures (Folder)
2. __pycache__
3. .gitignore
4. Problem_Solving_with_Programming_Project (Python File) (Outdated)
5. README.md
6. booking.py (Python File)
7. bookingsystem.py (Python File)
8. flight.py (Python File)
9. gui.py (Python File)
10. passenger.py (Python File)
11. price.py (Python File)
12. tempCodeRunnerFile.py (Python File)

No other files are required other than what is in the folder,

1.2 Installation

Download the .zip file from the source, decompress the file, the contents should be as stated above. An IDE with the Python Language should be used.

Prior to running the program additional modules are required, those being:

1. tkinter
2. tkcalendar
3. matplotlib

Each of which can be installed using the “pip install ‘name of module’ ” in the terminal of the IDE (Integrated development environment) or any well suited terminal.

1.3 Running the Program

The gui.py file is what is used to run the program.

Open up the project folder in an IDE (Integrated development environment), navigate to the gui.py file and run it from there.

User Section

2.1 Flight selection

The Flight selection page is a semi-static page that contains the different flight options as buttons, when an appropriate option is selected the user is pushed to the next step of the booking.

2.2 Seat Selection

The seat selection page is a static page similar to the flight selection page in terms of the layout, with 3 options available represented in the form of buttons. Once one is selected the user is pushed to the next step of the booking.

2.3 Date Selection

The Date selection page contains a calendar which is already on the earliest given date option for the given flight, from there the user can select the date required using the calendar. Once a suitable date is selected the user is pushed to the next step

2.4 Price

The Price page is shown on a small card displaying the flight, seat, availability, and the overall price, the user is prompted with 2 options, the next button will push the user to the next step of the booking while the back button sends the user back to the date selection page.

2.5 Customer Information

The customer information page contains 3 text boxes each requiring an input from the user:

1. Name (of any length)
2. Phone Number (between 10-11 integers)
3. Passport Number (9 integers & characters, **requires** a mix of both)

2.6 Booking Confirmed

A small page that appears when a booking has successfully occurred, then will shortly push the user back to the first page for any additional bookings.

Admin Section

3.1 Login Page

The login page has 2 text boxes one requiring an input from the user, these **cannot be left blank**.

The username & password for logging in is:

Username: **royalFlight01**

Password: **royalFlight01@**

All must be lowercase with no spaces or special characters

3.2 Revenue

The revenue page is based on the number of given bookings that occurred while the program has been running, it shows the total revenue for each flight in a bar chart

3.3 Remove Flight

The remove flight page contains all listed flights, clicking on them prompts the user to confirm, if so the flight is removed from the flight selection.
